## **About the application**

The application that we were requested to do is an online shop.

This shop must have been done with slim framework, a framework of php. Most wof the work has been done so here's a detail documentation what has been developed in these 2 days.

## **What does the Appliation do**

the application is an online shop application ,so the users there can see some products and can buy them. The shop sells PCs,laptops and printers.It has a login and a register page were the user can create an account.

After that, the user can walk through the web.

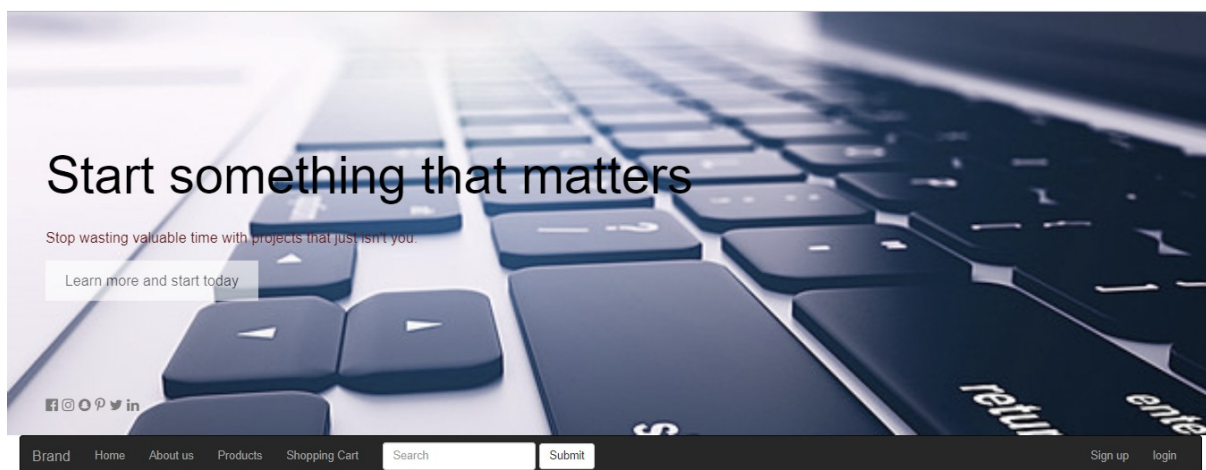

## **What are the limitations of the aplication**

For now, the application can't make it possible to buy anything because the shopping cart isn't functional but we hope that this will be possible in the future like a lot of other things too.

## User Interface

Pages that the user can see in this application are: Home page, About page, Products page, Login page and Register page.

below you can see some photos of the application views.

## Error handling

We included error handling for database and specific items do we include error handling globally

## Constraints

The user has some constraints when he logs in . He can't put inappropriate data in the fields in the login and register page.
